

Blind size measuring

1 WIDTH

The actual width of the blind from the outside edge of the brackets or head-box. Be mindful of any wide tiles or skirting boards which intrude into where the blind fabric might fall.

2 BLIND DROP

The total drop of the fabric measured from the top of the bracket (*window reveal) to the window sill or the floor.

3 HEIGHT FROM GROUND

This measurement is from the top of the bracket (*window reveal) to the floor. (This is to determine chain length for child safe regulations and so you can operate the blind easily should the window be high up).
